II. PRIORITY FOR TREATMENT

By placing disorder highest priority, blocked regulation second, and proximal radical differences (within the same region) third, priority for treatment can be established with providing the best strategies and patient benefits. Any therapies recommended are intended as general guidance for the physician and do not in any way represent qualified therapeutic decisions that may substitute for more appropriate directions of care determined by the treating physician or practitioner.

1. Thyroid (Hypo)
2. Dysbiosis (Mycosis or Bacterial Infection)
3. Toxicity Index Elevated
4. Dental Toxicity
5. Temporomandibular Joint, Vestibular or Neck
6. Endocrine Disorder

Subclinical symptoms often go untreated and eventually become problematic. With Regulation Thermometry, the reasons behind your symptoms become clear.

Is your dentistry affecting your health?

Your physician can see what’s affecting your health from a functional perspective, individualize a treatment program for you, and monitor your progress!
